

Photography & Measurements

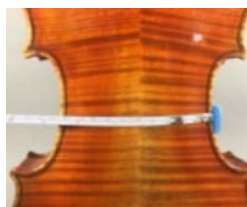

Please give any details you have regarding the instrument, including its history, the measurements of the instrument in millimeters (mm), and any documentation that would be useful for us for evaluation.

*Length of Back (LOB
326mm)*

Upper Back (UB 107mm)

*Middle/Center Back
(MB/CB)*

*Measure the Lower Back
(LB)*

Try to recreate the photos shown, and make sure the pictures are well-focused and taken against a plain, neutral-colored background. Do not use flash if possible, daylight is best. Always take pictures straight at the face of an instrument, no artistic shots at an angle please. (A cropped picture from your smart phone will work).

Your picture should show this view, pointed straight at the top without the neck and scroll.

Your picture should show this view, pointed straight at the back without the neck and scroll.

Your picture should show this view, pointed straight at the side of the scroll without the body.

Your photo should look like this, showing the frog of the bow from the side.

Your photo should look like this, showing the tip of the bow from the side.

Labels & Additional Information

Take a picture of any label inside the instrument or on the bow, this is made easier by shining a flashlight or phone light through the f-hole on the opposite side. If this is not possible, describe what the label says as fully as you can. Please note any other writing inside the instrument or brands as well.

Please send all photos to us by attaching them to an email. Or by sending us a link to your photos after you have uploaded them "in the cloud" with a service like Dropbox or Google Drive. These services allow for larger files to be sent simply by sharing a link with us to them in an email.
